ABSTRACT

Rembang is one of the districts in the north coast of Java, which most of the inhabitants work as fishermen. The number of fishermen in Rembang 20 482 people, consisting of 3089 people as skipper and 16 637 people as Pandega. Great Lakes port of Rembang is the only Coastal Fishing Port (PPP) in Rembang. The fishing vessel and fishing gear nets cantrang, many operating in waters north coast of Java, including in the waters of Rembang which then landed catches in Coastal Fishing Port (PPP) Rembang.

The purpose of the research conducted by researchers is, Knowing how preparations were done fishing before the fish, knowing the level of education possessed by the crew of fishing vessels, as well as knowing the sale of fish obtained by fishermen and expenses incurred for supplies in all departing fishing.

The method used is the method of qualitative and quantitative research with sequential processes. The collection of data through desk research, interviews, and documentation. In this study, researchers conducted observations directly to the Port of Lake Apex Court, and the researchers also conducted interviews with captains and ship owners cantrang. Researchers also shooting in order to support the validity of the data in this study.

From the results of this research is that the preparations made before leaving the vessel cantrang namely preparation supplies / materials and documents of the ship. Relatively low education level of fishermen, fishing boat captain and chief engineer only has a Certificate of Proficiency (SKK). Costs incurred ship owners for supplies ranging from 88,000,000.00 IDR - 94,000,000.00 IDR and the results obtained from the sale of fish catches ranging between 120,000,000.00 IDR - 130,000,000.00 IDR.

Based on the results of research should be done with the preparations as well as possible. Education Department should have information about the importance of formal education to enhance human resources and skills of fishermen.
