MOTO DAN PERSEMBAHAN

Moto:

- 1. "Menuntut ilmu itu wajib bagi setiap Muslim" (HR. Ibnu Majah).
- 2. "Festina Lente" (lebih baik bergerak perlahan dengan konsisten, daripada bergerak cepat namun ceroboh).
- 3. "Hidup yang tidak dipertaruhkan, tidak akan dimenangkan" (Sutan Sjahrir).

Persembahan:

- 1. Segala perjuangan saya hingga titik ini saya persembahkan khusus untuk Ibu, Bapak, Kakak dan Adik saya, yang selalu memberi dukungan serta doa yang menguatkan saya.
- 2. Seseorang yang ada di hatiku yang selalu memberi semangat dan doa dalam mengerjakan skripsi ini supaya cepat selesai.
- 3. Kasta Wirotaman yang memberikan tempat ternyaman dan rekan-rekan Taruna angkatan LVI yang telah bersama-sama menjalani pendidikan dengan penuh semangat di PIP Semarang.
- Almamaterku PIP Semarang dan juga pada juniorku, terimakasih atas bantuannya selama ini.

PRAKATA

Alhamdulillah, segala puji syukur saya panjatkan kehadirat Allah SWT yang Maha Pengasih lagi Maha Penyayang atas segala rahmat dan hidayah-Nya yang telah dilimpahkan kepada hamba-Nya sehingga penulisan ini dapat terselesaikan dengan baik. Sholawat serta salam senantiasa tercurahkan kepada Nabi Muhammad SAW yang telah mengantarkan kita menuju jalan yang benar.

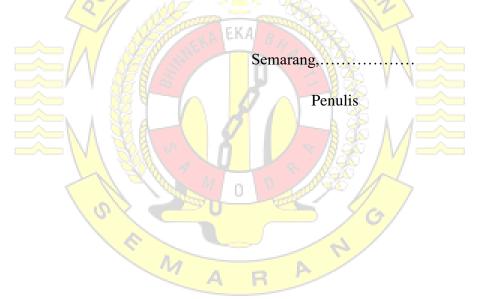

penulisan ini mengambil judul "Efektivitas kegiatan *loading* batubara sesuai *pre-stowage plan* dengan *final stowage plan* di MV. BBG YULIN" yang terselesaikan berdasarkan data-data yang diperoleh dari hasil penulisan selama praktik darat di PT. IDT Trans Agency.

Dalam usaha menyelesaikan penulisan penulisan ini, dengan penuh rasa hormat penulis menyampaikan ucapan terimakasih kepada pihak-pihak yang telah memberikan bimbingan, dorongan, bantuan serta petunjuk yang berarti. Untuk itu pada kesempatan ini penulis menyampaikan ucapan terimakasih kepada yang terhormat:

- 1. Bapak Dr.Capt.Tri Cahyadi, M.H.,M.Mar., selaku Direktur Politeknik Ilmu Pelayaran Semarang yang telah memberikan kemudahan dalam menuntut ilmu di Politeknik Ilmu Pelayaran Semarang.
- 2. Ibu Dr.Nur Rohmah, S.E, M.M., selaku Ketua Jurusan Tata Laksana Angkutan Laut Dan Kepelabuhan Politeknik Ilmu Pelayaran Semarang yang telah memberikan kemudahan dalam menuntut ilmu di Politeknik Ilmu Pelayaran Semarang.
- 3. Ibu Retno Hariyanti, S.Pd.,M.M selaku Dosen Pembimbing Materi Penulisan Skripsi yang dengan sabar dan tanggung jawab telah memberikan dukungan, bimbingan, dan pengarahan dalam penyusunan skripsi ini.
- 4. Bapak Dr.Capt.Ilham Ashari, S.Si.T.,M.M., M.Mar., selaku Dosen Pembimbing Metode Penulisan Skripsi yang telah memberikan dukungan, bimbingan, dan pengarahan dalam penyusunan skripsi ini.

- 5. Pimpinan beserta karyawan perusahaan PT. IDT Trans Agency yang telah memberikan kesempatan serta telah memberikan membimbing dan membantu penulis selama melaksanakan penulisan dan praktik.
- 6. Ibu dan Bapak tercinta, serta orang-orang yang telah memberikan dukungan moril dan spiritual kepada penulis selama penulisan skripsi ini.
- Semua pihak dan rekan-rekan saya angkatan LVI yang telah memberikan motivasi dan membantu dalan penyusunan skripsi ini.

Akhirnya, dengan segala kerendahan hati penulis menyadari masih banyak terdapat kekurangan-kekurangan, sehingga penulis mengharapkan adanya saran dan kritik yang bersifat membangun demi kesempurnaan skripsi ini. Akhir kata penulis berharap agar penulisan ini bermanfaat bagi seluruh pembaca.

ABSTRAKSI

Hasan, Fahad. 561911337456 K. 2022. "Efektivitas kegiatan loading batubara sesuai pre-stowage plan dengan final stowage plan di MV.BBG YULIN". Skripsi. Program Diploma IV, Program Studi Tatalaksana Angkutan Laut dan Kepelabuhanan, Politeknik Ilmu Pelayaran Semarang, Pembimbing I: Retno Hariyanti, S.Pd.,M.M Pembimbing II: Dr.Capt. Ilham Ashari, S.Si.T.,M.M., M.Mar.,

Kegiatan yang dilakukan di Muara Berau anchorage Samarinda pada tanggal 20 juni 2022 sampai 26 juni 2022 tidak selalu berjalan lancar dikarenakan adanya hal yang sering terjadi yaitu adanya kekurangan cargo. Kekurangan cargo disebabkan oleh beberapa faktor seperti gelombang sangat besar yang menyebabkan kesulitan dalam membaca draft kapal sehingga sulit menentukan total muatan yang termuat di dalam palka. Oknum pencurian batu bara di saat tongkang perjalanan menuju loading point di Muara Berau anchorage, dan terdapat banyak tumpahan muatan disaat batubara dipindahkan ke palka kapal dari tongkang. Tujuan dari penelitian ini adalah untuk mengetahui Efektivitas Kegiatan Loading Batubara Sesuai Pre-Stowage Plan Dengan Final Stowage Plan Di Mv. BBG YULIN.

Penelitian ini menggunakan metode kualitatif deskriptif dengan menggunakan metode Triangulasi. Metode Triangulasi meliputi data primer yaitu wawancara dan data sekunder yakni dokumentasi serta data primer. Penelitian yakni sebuah cara ilmiah (sistematik, empiris, serta rasional) yang peneliti gunakan dalam menyelenggarakan penelitian sehingga bisa memperoleh data demi tujuan tertentu.

Berdasarkan hasil penelitian dapat disimpulkan faktor penyebab terjadinya ketidaksesuaian *pre-stowage plan* dengan *final stowage plan* pada saat proses pemuatan di MV.BBG YULIN yaitu telah terjadi pencurian batubara di sepanjang alur sungai Mahakam sampai *loading point*, dan tumpahnya batubara disaat proses pemuatan. Upaya yang dilakukan untuk mengurangi terjadinya ketidaksuaian *pre-stowage plan* dengan *final stowage plan* pada saat proses pemuatan di MV.BBG YULIN yaitu dengan melakukan pengawalan tongkang dan menambah foreman pada saat dilakukan pemuatan batubara di MV.BBG YULIN. Perusahaan *Shipper* dan *Surveyor* sebaiknya mengadakan pelatihan khusus untuk karyawan yang terlibat langsung di lapangan agar pekerjaan lebih efektif dan efisien serta mengurangi kesalahan dalam pekerjaan.

Kata Kunci: *Stowage Plan*, pencurian muatan, efektivitas muatan, keamanan batubara.

ABSTRACT

Hasan, Fahad. 561911337456 K. 2022. "Efektivitas kegiatan loading batubara sesuai pre-stowage plan dengan final stowage plan di MV.BBG YULIN". Thesis. Diploma IV Program, Port And Shipping Studies Program, Politeknik Ilmu Pelayaran Semarang, Advisor I: Retno Hariyanti, S.Pd., M.M. Advisor II: Dr.Capt. Ilham Ashari, S.Si.T., M.M., M.Mar.,

The activities carried out at the Muara Berau Samarinda port from June 20 to June 26, 2022, did not always run smoothly due to things that often happened, namely a shortage of cargo. The shortage of cargo was caused by several factors, such as very large waves which made it difficult to read the ship's draft, making it difficult to determine the total cargo loaded in the hold. Unscrupulous coal theft occurred when the barge was traveling to the loading point at the port of Muara Berau, and there was a lot of cargo spillage when the coal was transferred to the ship's hold from the barge. The purpose of this study was to determine the effectiveness of coal loading activities according to the pre-stowage plan and the final stowage plan at MV. BBG YULIN.

This study uses a case study qualitative method using the triangulation method. The triangulation method includes primary data, namely interviews, and secondary data, namely documentation and primary data. Research is a scientific method (systematic, empirical, and rational) that researchers use in conducting research so they can obtain data for a specific purpose.

Based on the results of the study, it can be concluded that the factors causing the discrepancy between the pre-stowage plan and the final stowage plan during the loading process at MV.BBG YULIN were coal theft along the Mahakam river channel up to the loading point, and coal spilling during the loading process. Efforts were made to reduce the discrepancy between the pre-stowage plan and the final stowage plan during the loading process at MV.BBG YULIN, namely by escorting the barge and adding a foreman when loading coal at MV. BBG YULIN. Shipper and surveyor companies should conduct special training for employees who are directly involved in the field so that work is more effective and efficient and reduces errors.

Keywords: Stowage plan, cargo theft, cargo effectiveness, coal safety.

BAB I

PENDAHULUAN

A. Latar Belakang

Pertumbuhan ekonomi yang berlangsung dalam dekade terakhir di memperlihatkan perkembangan Indonesia yang signifikan, dengan pertumbuhan pada sektor perdagangan ekspor dan impor yang menjadi paling pesat pertumbuhannya. Batu bara yakni sebuah bahan bakar fosil dimana diperoleh melalui perubahannya sisa-sisa dari tumbuhan beratus juta tahun lalu di zaman purba. Batu bara saat ini ditambang serta dipergunakan dalam menghidupkan PLTU (pembangkit listrik tenaga uap). Sungai Mahakam merupakan salah satu sungai yang mempunyai lapisan tanah dengan komponen batu bara yang tinggi, oleh karena itu banyak sekali penambangan batu bara di<mark>laku</mark>kan sekitar Sungai Mahakam, baik yang ilegal maupun yang berlisensi. Sehingga hal ini menyebabkan ada oknum yang curang di penambangan. Kegiatan penambangan ini sangat berdampak pada masyarakat sekitar. Dampak positif dari penambangan batu bara ini antara lain meningkatkan produksi batu bara untuk mendukung produksi yang dihasilkan oleh PLTU. Energi ini bisa dipergunakan bagi industri maupun rumah tangga, serta hal ini bisa membuka lapangan kerja baru sebagai pekerja tambang guna menekan banyaknya pengangguran.

Dampak buruk dari penambangannya batu bara antara lain polusi udara, hutan gundul, serta *global warming*. Pemerintah diharapkan bisa mentertibkan kegiatan penambangan yang terdapat di Kalimantan Timur dan diberikannya sanksi berat kepada kegiatan penambangan liar, serta memberikan sanksi kepada pemilik tambang yang tidak melakukan reboisasi terhadap lubang tambang yang telah digali dan dibiarkan begitu saja.

Banyak dari kapal domestik maupun dari luar negeri yang datang ke Muara Berau anchorage,, Samarinda guna melaksanakan transhipment (pemuatan) batu bara sehingga bisa di ekspor ke beragam negara. Pemuatan ini dilaksanakan sebab para kapal yang besar tidak dimungkinkan mengarah ke jetty dikarenakan sungai yang dangkal, dan kapal berlabuh pada achorage point yang mana memiliki aspek keselamatan yang lebih baik. Perusahaan batu bara dalam memuat batu baranya menuju loading point dari jetty memilih untuk mempergunakan jasa tongkang, sebab mempunyai draft cukup rendah yang membuatnya bisa mengangkut batu bara melalui sungai.

PT. Tri Sensami Neralutama yakni sebuah perusahaan yang berjalan selaku produsen dan eksportir batu bara yang terdapat pada Muara Berau anchorage, Samarinda. Kegiatan yang dilakukan di Muara Berau anchorage, Samarinda tidak selalu berjalan lancar, salah satunya hal yang sering terjadi adalah adanya kekurangan cargo. Kekurangan cargo bisa disebabkan oleh beberapa faktor, adalah adanya gelombang sangat besar yang menyebabkan kesulitan dalam membaca draft kapal sehingga sulit

menentukan total muatan yang termuat di dalam palka, adanya oknum pencurian batu bara di saat tongkang perjalanan menuju loading point di Muara Berau anchorage,, Samarinda. Terdapat banyak tumpahan muatan di saat batu bara dipindahkan ke palka kapal dari tongkang. Selain itu penyebab yang lain adalah perusahaan pengekspor harus berhati-hati dan teliti ketika proses pemuatan untuk mengindari kekurangan muatan. Dengan adanya kekurangan cargo yang dimuat, perusahaan menerima letter of protest dari crew kapal. Klaim tersebut berisi tentang pernyataan Kapten, menunjuk pada kurangnya cargo yang menyebabkan deadfreight dalam proses pemuatan. Perusahaan yang memiliki cargo bertanggung jawab untuk menyelesaikan cargo yang hilang melalui melangsungkan negosiasi dengan pembelinya. Kapal tidak akan pergi jika muatannya masih belum selaras pada rencana awal ataupun stowage plan, dimana memaksa eksportir untuk menuntaskan permasalahan itu sebelum kapal terkena otoritas sekitar.

Pada saat peneliti melaksaakan penelitian di PT. IDT Trans Agency Cabang Samarinda, peneliti menemukan beberapa masalah, salah satunya masalah tentang perubahan *stowage plan* dimana kapal yang peneliti tangani pada tanggal 20 juni 2022 sampai 25 juni 2022 MV. BBG Yulin berbendera Liberia memiliki No IMO 9652571, *call sign* D5W17, *net tonnage* 27816 dan *dead weight summer* 82293,0 dikirm menuju pelabuhan Paradip, India sebagai pelabuhan bongkar, dimana seharusnya mempunyai *stowage plan* sejumlah 77,000 MT tetapi ketika pengecekan *final draft survey*, hanya terdapat 76,625 MT muatan di dalam palka.

Supplier tidak bisa mensuplay muatannya kembali, dimana mendorong Kapten memberikan letter off protest berisikan tentang muatan yang kurang dalam transhipment. Dari penjelasan di atas, perubahan stowage plan atau kekurangannya cargo harus dituntaskan oleh eksportir serta pihak kapal atau pembeli.

Dengan adanya permasalahan ini, mendorong peneliti dalam menyelenggarakan penelitian melalui judul "EFEKTIVITAS KEGIATAN LOADING BATU BARA SESUAI PRE-STOWAGE PLAN DENGAN FINAL STOWAGE PLAN DI MV. BBG YULIN"

EKA

B. Fokus Penelitian

Fokus dari penelitian kali ini bertujuan menetapkan jenis penelitian dan memberikan pembatasan permasalahan. Untuk jenis penelitian ini, peneliti melakukan penelitian jenis deskripsi kualitatif, sedangkan fokus permasalahan adalah yang terjadi di PT. IDT Trans Agency Samarinda yaitu tentang ketidaksesuaian *pre-stowage plan* dengan *final stowage plan* oleh PT. IDT Trans Agency di Muara Berau Samarinda.

C. Rumusan Masalah

Rumusan masalah yang peneliti bentuk diantaranya:

- apakah yang menyebabkan terjadinya ketidaksesuaian pre-stowage plan dengan final stowage plan pada kegiatan loading batu bara di MV. BBG YULIN?
- 2. apa upaya yang dilakukan oleh PT. IDT Trans Agency guna mencegah terjadinya ketidaksesuaian *pre-stowage plan* dengan *final stowage plan* pada kegiatan *loading* batu bara di MV. BBG YULIN?

D. Tujuan Penelitian

Apapun tujuannya pelaksanaan penelitian ini yakni:

- 1. untuk mengetahui penyebab ketidaksesuaian pre-stowage plan dengan final stowage plan.
- 2. untuk mengetahui upaya yang dilakukan PT. IDT Trans Agency Samarinda untuk mencegah ketidaksesuaian *pre-stowage plan* dengan final stowage plan ketika bongkar muat selesai.

E. Manfaat Hasil Penelitian

Pelaksanaan penelitian kali ini diharap mampu menyajikan beragam manfaat untuk peneliti sekaligus pembaca terkait dengan dunia pelayaran serta memberikan wawasan untuk individu. Berikut manfaat penelitian tersebut:

1. Manfaat secara teoritis

Menambah wawasan pembaca dalam meningkatkan edukasi terkait proses pemuatan batu bara di MV. BBG YULIN.

2. Manfaat secara praktis

Untuk menambah referensi serta saran mengenai penyebab ketidaksesuaian *pre-stowage plan* dengan *final stowage plan* dalam pemuatan batu bara di MV. BBG YULIN.

BAB II

KAJIAN TEORI

A. Deskripsi Teori

Sub Bab II ini memberikan bahasan terkait beragam teori yang ahli kemukakan, sehingga peneliti di sini akan memberikan kutipan dari teori yang masih mempunyai kaitan pada variabel dari beragam sumber. Kemudian juga dipaparkan kerangka pemikiran sehingga mampu memudahkan alur dari pelaksanaan penelitian serta untuk memberikan jawaban bagi rumusan permasalahan yang peneliti tentukan.

1. Efektivitas

Efektivitas yakni sebuah tingkatan keberhasilan yang organisasi ataupun seseorang peroleh melalui suatu cara yang sesuai pada sasaran yang ingin diwujudkan. Ataupun bisa dikatakan semakin banyaknya rencana yang sukses diwujudkan akan menandakan sebuah kegiatan mempunyai efektifitas yang baik.

Menurut Mardiasmo (Suruni dkk:2022), efektivitas yakni ukuran berhasil tidaknya pencapaian tujuan suatu organisasi mencapai tujuannya.

Ravianto (Suruni dkk:2022) menjelaskan, efektivitas yakni sebaik apakah pekerjaan yang dilaksanakan, seberapa jauh keluaran yang dihasilkan sejalan pada harapan. Ataupun bisa dikatakan bila sebuah pekerjaan bisa dilaksanakan sejalan pada rencana, baik secara mutu, biaya, serta waktu, artinya bisa dinyatakan efektif.

Sedangkan efektivitas menurut Beni (2016:69) adalah Hubungan antara output dan tujuan atau dapat juga dikatakan merupakan ukuran seberapa jauh tingkat output, kebijakan dan prosedur dari organisasi. Efektivitas juga berhubungan dengan derajat keberhasilan suatu operasi pada sektor publik sehingga suatu kegiatan dapat dikatakan efektif jika kegiatan tersebut mempunyai pengaruh besar terhadap kemampuan menyediakan pelayanan masyarakat yang merupakan sasaran yang telah ditentukan.

a. Kriteria Efektivitas

Sebuah kegiatan bisa dinyatakan mempunyai efektifitas yang baik jika mampu memenuhi sejumlah kriteria. Efektivitas sendiri berkaitan erat pada terjalankannya sejumlah tugas pokok, ketepatan waktu, tercapainya tujuan, dan terdapatnya partisipasi aktif maupun usaha dari penyelenggara tugas itu. Sejumlah kriteria ataupun tolak ukur secara umum dari efektivitas diantaranya:

- efektivitas secara menyeluruh, yakni seberapa jauh perusahaan ataupun seseorang menjalankan tugas pokoknya dengan menyeluruh.
- 2) efisiensi, yakni pengukuran untuk keberhasilannya sebuah kegiatan yang penilaiannya mengacu dari seberapa besar penggunaan sumber daya demi memperoleh hasil yang diharapkan.

- produktivitas, yakni kuantitas dari jasa ataupun produk pokok yang dihasilkan.
- 4) pertumbuhan, yakni sebuah perbandingan diantara kondisi perusahaan saat ini terhadap kondisinya di masa terdahulu (baik secara fasilitas, tenaga kerja, penjualan, harga, laba, market share, modal, serta sebagainya).
- 5) stabilitas, yakni pemeliharaan untuk sumber daya, fungsi, serta struktur sepanjang waktu terutama di masa yang sulit.
- 6) laba, yakni keuntungan dari proses menanamkan modal yang dipergunakan dalam mengoperasikan sebuah kegiatan.
- 7) kepuasan kerja, yakni kompensasi ataupun timbal-balik positif yang seseorang rasakan untuk perananannya di perusahaan.
- 8) semangat kerja, yakni kecenderungannya seorang individu untuk lebih keras berusaha mewujudkan tujuan perusahaan, contohnya perasaan memiliki, kebersamaan tujuan, serta perasaan terikat.
- 9) penerimaan tujuan organisasi, yakni diterimanya beragam tujuan dari organisasi dari tiap unit maupun individu di dalamnya.
- 10) keterpaduan, yakni terdapatnya kerja sama serta komunikasi yang baik diantara anggota untuk mengoordinasikan usaha kerjanya.
- 11) penilaian pihak luar, yakni penilaian untuk organisasi ataupun individu dari beragam pihak lainnya dari sebuah lingkungan yang mempunyai kaitan.

12)keluwesan adaptasi, yakni kemampuannya perusahaan ataupun individu dalam menyesuaikan dirinya dengan sebuah perubahan yang ada.

b. Aspek-Aspek Efektivitas

Berdasar dari sejumlah definisi efektivitas sebelumnya, bisa dijelaskan bahwasanya efektifitas mempunyai sejumlah aspek yang diantaranya:

1. Aspek Fungsi/Tugas

Perusahaan ataupun individu bisa dinyatakan mempunyai efektifitas tinggi bila mampu menjalankan fungsi serta tugasnya secara baik sejalan pada ketetapan. Sehingga tiap individu dari sebuah perusahaan diharuskan memahami fungsi serta tugasnya sehingga mampu memberikan efektivitas yang baik.

2. Aspek Peraturan/ Ketentuan

Sebuah peraturan dibentuk demi mempertahankan keberlangsungan aktivitas untuk berlangsung sejalan dengan perencanaan. Ketentuan ataupun peraturan yakni sebuah hal yang perlu dijalankan supaya sebuah kegiatan bisa dinyatakan telah berlangsung secara efektif.

3. Aspek Tujuan/ Kondisi Ideal

Adapun yang dinyatakan dengan tujuan maupun kondisi ideal yakni sasaran yang ingin diraih dalam sebuah kegiatan melalui berorientasikan terhadap proses serta hasil yang dirancang.

4. Aspek Rencana/ Program

Sebuah kegiatan bisa dinyatakan mempunyai efektifitas yang baik bila mempunyai perencanaan yang tepat, dimana tanpa keberadaan dari program maupun perencanaan akan mengakibatkan tujuan sulit dicapai.

2. Bongkar Muat

Bongkar yakni sebuah aktivitas untuk memindahkan muatannya kapal menuju tongkang, alat angkut, ataupun dermaga, sementara muat yakni kebalikannya untuk memindahkan muatan dari alat angkut ataupun atas dermaga ke dalam palka dari kapal dalam buku yang berjudul Pokok-Pokok Pelayaran Niaga Menurut F.D.C. Sudjatmiko (2007:264)

Sesuai dengan Peraturan Menteri Perhubungan Nomor Pm. 60 Tahun 2014 Pasal 2, bahwasanya usaha bongkar muat barang diartikan selaku "usaha yang bergerak dalam bidang bongkar muat barang dari dan ke kapal di pelabuhan yang meliputi kegiatan *stevedoring, cargodoring,* dan *receiving/delivery*".

Bedasarkan Peraturan Menteri Perhubungan No. 152 Tahun 2016 tentang Penyelenggaraan dan pengusahaan Bongkar Muat Barang Dari/Ke Kapal, dijelaskan bahwasanya bongkar muat diartikan selaku "kegiatan yang berkaitan dengan pemuatan barang ke kapal, termasuk kegiatan yang berkaitan dengan bongkar muat barang dari kapal".

Adapun yang dimaksud dengan bongkar muat yakni aktivitas pemindahan barang pada pelabuhan, dimana dalam melaksanakannya perlu disediakan sarana atau peralatan yang sesuai dengan cara atau prosedur pengangkutan tersebut.

Berdasarkan definisi ini, bisa dinyatakan bongkar muat yakni aktivitas untuk memindahkan barang dari kapal menuju darat maupun sebaliknya dengan pengangkutan secara aman ke daerah tujuan serta pengolahannya selaras pada prosedur mempergunakan dengan fasilitas bongkar muat yang tersedia.

Suyono (2017) mengutarakan, bongkar muat mempunyai sebuah prosedur yang diawali dengan penyiapan dokumen bongkar/muat yang diantaranya:

a. Cargo List, yakni daftar dari keseluruhan barang yang hendak dimuat pada kapal. Daftar ini disusun perusahaan pelayaran maupun agen untuk kemudian diberikan ke seluruh pihak yang berkaitan terhadap proses muat, yakni kapal, gudang, stevedoring, serta lainnya.

- b. Bill Of Lading, ataupun dinamakan juga konosemen yakni sebuah kontrak pengangkutan serta juga menjadi bukti tanda penerimaan bagi pengangkut.
- c. *Tally sheet*, yakni ditujukan bagi keseluruhan barang yang termuat pada kapal, yang dibuat juga guna mencatat seluruh barang yang melalui pembongkaran. Lembar ini harus ditandatangani *captain* serta *agent* untuk menghindari ketidakselarasan dari pengiriman.
- d. *Stowage Plan*, yakni sebuah bagan dari kapal di mana muatan diletakkan, disertai dengan kelengkapan data dari pelabuhan bongkar serta muat, nama dari barang, berat, serta jumlahnya.
- e. *Mate's Receipt*, yakni sebuah tanda terima yang hendak dimuat ke kapal, yang mana disusun oleh agen serta ditandatangani Mualim I.

3. Muatan Kapal

Cargo ataupun muatan kapal yakni sebuah objek yang diangkut melalui transportasi laut, melalui pengangkutan ini maka suatu perusahaan pelayaran niaga bisa mendapatkan pemasukan berwujud freight (uang tambang) yang akan menjadi penentu keberlangsungan dari perusahaan tersebut sekaligus untuk mendanai aktivitas yang berlangsung pada pelabuhan.

Fakhrurrozi (2017:5) melalui buku miliknya "Penanganan, Pengaturan dan Pengamanan Muatan", mengklasifikasikan muatan dari kapal laut sesuai pada cara pemuatan, sifat muatan, serta perhitungan biaya angkutnya.

Arwinas (2014:9) menjelaskan bahwasanya muatan kapal bisa diklasifikasikan melalui jenis pengapalan, sifat muatan, maupun jenis kemasan. Klasifikasi untuk muatan dalam jenis pengapalannya meliputi:

- a. Heterogenous Cargo (Muatan campuran), berupa muatan yang mencakup beragam jenis serta mayoritasnya mempergunakan kemasan ataupun dengan satuan unit (drum, pallet, bag) yang juga dengan disebut muatan general cargo.
- b. Homogenous Cargo (Muatan Sejenis), berupa seluruh muatan yang secara bersama dikapalkan dalam sebuah palka ataupun kompartemen, serta tidak dicampurkan bersama muatan lainnya tanpa penyekat, yang dimuat mempergunakan kemasan tertentu ataupun secara curah.

Pengklasifikasian muatan dengan berdasar dari jenis kemasan, diantaranya:

a. Muatan curah (bulk cargo)

Muatan ini meliputi sebuah muatan yang tak dikemas, dimana dengan jumlah yang besar dikapalkan sekaligus.

b. Muatan *unitized*

Berupa muatan dengan beragam unit yang mencakup sejumlah jenis, digabungkan mempergunakan *bag*, *pallet*, karung, karton, maupun bungkus lain supaya bisa disusun mempergunakan pengikat.

c. Muatan Curah Kering

Berupa muatan curah yang berbentuk padat, misalnya bubuk, bijibijian, butiran, serta sejenisnya, dimana dalam pembongkaran/pemuatannya dilaksanakan melalui menuangkan muatannya itu ke dalam palka mempergunakan alat khusus. Contohnya muatan ini yakni kedelai, gandum, pasir, jagung, klinker, semen, soda, serta sejenisnya.

d. M<mark>uata</mark>n curah padat

Berupa muatan curah dengan wujud butiran, serbuk, batu bara, serta sejenisnya dengan pembongkaran/pemuatan yang dilaksanakan melalui mencurahkannya ke palka mempergunakan alat yang khusus.

e. Muatan Curah Cair

Berupa muatan dengan bentuk cair dimana diangkut melalui penggunaan kapal khusus, ataupun yang dinamakan kapal tanker. Contohnya yakni produk kimia, CPO (*crude palm oil*), bahan bakar, serta sejenisnya.

f. Muatan Peti Kemas

Berupa muatan dengan bentuk wadah besi ataupun baja yang dipergunakan dalam menghimpun ataupun menyimpan barang.

g. Muatan curah gas

Berupa muatan curah dengan wujud gas yang dimampatkan, misalnya LPG (gas alam).

Pengelompokannya muatan dengan berdasar dari sifat muatannya yakni:

- 1. muatan menggangu.
- 2. muatan sensitif.
- 3. muatan berharga.
- 4. muatan berbahaya.
- 5. muatan rahasia.
- 6. muatan ternak/hewan.
- 7. muatan dingin.

Sebuah pelayanan angkutan muatan bisa dinyatakan baik bila:

- a) muatan tidak hilang ataupun rusak
- b) muatan datang secara tepat waktu
- c) tarif *freight* (uang tambang) selaras pada pasaran supaya harga jualnya barang bisa memberikan laba
- d) klaim kehilangan ataupun kerusakan dibayarkan dengan cepat
- e) terbentuk hubungan yang baik terhadap para pengangkut

Supaya kapal bisa dioperasikan dengan efisien, ketika melaksanakan perancangan dalam mengangkut muatan, maka perusahaan pelayaran diharuskan untuk memperhatikan:

- a) jenis dari muatan
- b) jenis dari kapal, bentuk ruangan muatan, dan kendala yang bisa saja terjadi
- c) banyaknya pelabuhan yang hendak disinggahi serta keberadaan dari fasilitas untuk membongkar ataupun menerima muatan
- d) jadwal pelayarannya kapal supaya tidak berbentrokan
- e) opsi muatan yang bisa diperoleh

Adapun dalam meraih hasil ini, maka perusahaan pelayaran diharuskan untuk memberikan perhatiannya terhadap kendala seperti:

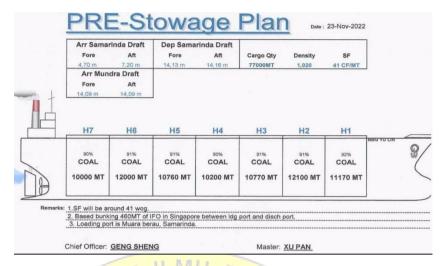

- a) keselamatannya ABK serta orang lain
- b) kerusakannya kapal
- c) kerusakan<mark>ny</mark>a muatan
- d) kecepatan serta sistematika bongkar muat
 - e) penggunaan ruang muatan kapal dengan optimal

4. Stowage plan

Stowage Plan bisa diklasifikasikan dalam dua jenis, yang diantaranya:

a. Pre-Stowage Plan.

Yakni gambaran dari ancar-ancarnya sebuah rencana untuk mengatur muatan, dimana dibentuk sebelum tibanya kapal pada pelabuhan untuk melaksanakan pemuatan. Rencana ini dibentuk berdasar dari *shipping order* ataupun *booking list* yang diperoleh untuk sebuah pelabuhan (Mahreni M., & Puspitasari M, 2019)

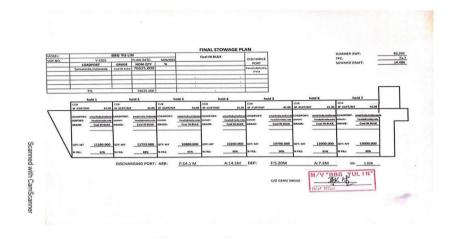

Gambar 2.1 Pre-Stowage plan

Sumber: Dokumen Kapal

b. Final Stowage Plan.

Yakni gambaran informasi dimana memperlihatkan kondisi sebetulnya posisi muatan, berat, serta jumlahnya di setiap palka yang disertai consignment mark bagi setiap pelabuhan. Sesudah selesai mengatur muatan, kemudian keadaan sebenarnya dari muatan pada palka bisa diketahui melalui Stowage Plan, sehingga membuatnya harus disusun dengan sangat teliti dikarenakan termasuk dalam dokumen krusial yang mempunyai fungsi menjadi bukti/bahan pertanggungjawaban untuk pengaturannya muatan bilamana timbul tuntutan claim ataupun ganti rugi

Selain pihak *carrier* menyusun *stowage plan*, juga harus membentuk *discharging list* (daftar bongkaran muatan) serta *hatch list* (daftar muatan dari setiap palka) sebagai pelengkap informasi dalam *stowage plan*. (Mahreni M., & Puspitasari M, 2019)

Gambar 2.2 Final Stowage plan

Sumber: Dokumen Kapal

5. Batu bara

Batu bara yakni sebuah bahan bakar dengan bentuk padat yang terbentuk dari fosil. Sementara untuk definisinya secara umum yakni batuan sedimen yang bisa dibakar, tercipta melalui endapan organik, khususnya sisa tumbuhan. Unsur pokoknya meliputi hidrogen, karbon, oksigen, serta nitrogen. Batu bara pun menjadi sebuah batuan organik dengan sifat-sifat kimia serta fisika yang terbilang kompleks, bisa diperoleh dengan beragam bentuk, baik balok, kubus, segitiga, maupun bulat.

Batu bara yakni sebuah bahan bakar jenis fosil yang terbentuk melalui tumbuhan yang terkubur di tanah. Adapun supaya menjadi batu bara, maka fosil dari tumbuhan itu akan memerlukan sebuah proses yang panjang sekali, diantara 100-300 juta tahun. Selayaknya yang diketahui bahwasanya tanaman yang sudah mati serta membusuk akan melalui

pelapukan, dimana kemudian akan terurai hancur dengan jangka tertentu.

Tetapi kondisi tersebut tidak berlangsung untuk tanaman di masa lampau, hal ini dikarenakan terjadinya fenomena dari alam. Penyebabnya tanaman bisa berubah dalam proses ratusan tahun sebagai batu bara itu dikarenakan telah tertimbun. Seperti dikarenakan banjir, longsor, maupun penyebab lain. Kemudian dikarenakan sumber panas serta tekanan dari bumi mengakibatkannya bertransformasi sebagai batu bara.

Adapun sejumlah jenis dari batu bara yaitu antrasit, bituminous, lignit serta gambut, dimana bisa dijelaskan sebagai:

a. Batu bara antrasit

Jenis *antrasit* ini termasuk dalam batu bara yang bisa ditemui dalam wilayah Indonesia, dimana juga tergolong dalam jenis kelas paling tinggi. Sebab *antrasit* mengandung unsur karbon diantara 85-95% dengan air di bawah 9%. Kualitas batu bara terbaik ini dihargai cukup tinggi, dikarenakan prosesnya yang memerlukan waktu hingga jutaan tahun.

Gambar 2.3 Batu bara Antrasit

Sumber: https://elrajab.com/jenis-batu bara/

b. Batu bara bituminus

Bituminus diklasifikasikan sebagai urutan kedua tertinggi, dimana mengandung karbon diantara 67-86% dengan air hanya 9-10%. Jenis ini pun bisa kita temui dalam wilayah Indonesia, walaupun diklasifikasikan sebagai jenis kedua, namun melihat fungsi serta manfaatnya tetap saja memperoleh permintaan yang tinggi. Batu bara ini pun mempunyai peran yang krusial untuk mengoperasikan PLTU.

Gambar 2.4 Batu bara Bituminus

Sumber: https://elrajab.com/jenis-batu-bara/

c. Batu bara lignit

Jenis ini mengandung cukup tinggi air, yakni diantara 37-73%. Batu bara ini berwarna cokelat serta bentuknya lunak, hal ini

dikarenakan oleh tingginya kandungan air yang dimilikinya.

Gambar 2.5 Batu bara *lignit*Sumber: https://elrajab.com/jenis-batu bara/

d. Batu bara Gambut

Jenis batu bara gambut ini diklasifikasikan sebagai jenis batu bara yang paling rendah, sebab bentuknya yang mempunyai pori. Kandungan airnya bahkan melebihi 79% serta mempunyai kalori yang tergolong rendah.

Gambar 2.6 Batu bara gambut Sumber: https://elrajab.com/jenis-batu bara/

Dari seluruh jenis yang dijabarkan di atas, hampir secara keseluruhan bisa ditemui dalam wilayah negara kita ini. Berhasil meraih posisi tiga dari seluruh dunia, membuat Indonesia menjadi penghasil batu bara yang sangat besar. Adapun juga umum diketahui bahwasanya bahan bakar berjenis batu bara ini termasuk sebagai sumber dari energi yang tak bisa diperbaharui.

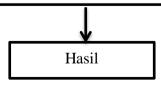

6. Kerangka Penelitian

Kerangka penelitian menerangkan bagaimana adanya masalah yang berperan sebagai halangan dalam tahapan *transhipment* batu bara pada perusahaan ekspor di Indonesia.

EFEKTIVITAS KEGIATAN *LOADING* BATU BARA SESUAI DENGAN *PRE-STOWAGE PLAN* DENGAN *FINAL STOWAGE PLAN* DI MV.BBG Yulin

- 1. Apakah yang menyebabkan terjadinya ketidaksesuaian *pre-stowage* plan dengan *final stowage* plan pada kegiatan *loading* batu bara di MV.BBG Yulin.
- 2. Upaya yang dilakukan oleh PT.IDT Trans Agency guna mencegah terjadinya ketidaksesuaian *pre-stowage plan* dengan *final stowage plan* pada kegiatan *loading* batu bara di MV.BBG Yulin.
- 1. Untuk mengetahui penyebab ketidaksesuaian *pre-stowage plan* dengan *final stowage plan* pada kegiatan *loading* batu bara di MV.BBG Yulin
- 2. Untuk mengetahui upaya yang dilakukan PT.IDT Trans Agency Samarinda untuk mencegah ketidaksesuaian *pre-stowage plan* dengan *final stowage plan* pada kegiatan *loading* batu bara di MV.BBG Yulin

Beberapa penjelasan mengenai penyebab dan upaya yang dilakukan PT.IDT Trans Agency untuk mencegah ketidaksesuaian *pre-stowage plan* dengan *final stowage plan* pada kegiatan *loading* batu bara di MV.BBG Yulin

Gambar 2.7 Kerangka penelitian

BAB V

SIMPULAN DAN SARAN

A. Simpulan

Berdasarkan hasil pembahasan pada bab IV mengenai efektivitas kegiatan *loading* batu bara sesuai *pre-stowage plan* dengan *final stowage plan* di MV. BBG Yulin, maka dapa disimpulkan sebagai berikut:

- 1. Faktor penyebab terjadinya ketidaksesuaian pre-stowage plan dengan final stowage plan pada saat proses pemuatan di MV.BBG Yulin yaitu telah terjadi pencurian batu bara di sepanjang alur sungai Mahakam sampai loading point, dan tumpahnya batu bara di saat proses pemuatan. Hal ini menyebabkan pada saat proses pemuatan di MV.BBG Yulin terdapat kekurangan muatan, dimana berdasarkan permintaan seharusnya berjumlah 77,000 metrik ton, namun yang termuat dikapal hanya 76,625 metrik ton sehingga menyebabkan perbedaan pre-stowage plan dan final stowage plan sebesar 375 metrik ton, sehingga dikeluarkan letter of protest dari Kapten kapal. Letter of protest ini diberikan kepada Shipper sebagai dokumen kekurangan muatan yang terjadi. Oleh karena itu Shipper harus melakukan pembayaran ganti rugi sesuai dengan perjanjian yang dibuat sebagai bentuk pertanggung jawaban pemilik barang.
- Upaya yang dilakukan untuk mengurangi terjadinya ketidaksuaian prestowage plan dengan final stowage plan pada saat proses pemuatan di MV.BBG Yulin yaitu dengan melakukan pengawalan tongkang dan

menambah *foreman* pada saat dilakukan pemuatan batu bara di MV. BBG Yulin.

B. Keterbatasan Penelitian

Dalam penelitian ini, peneliti memiliki keterbatasan dalam melaksanakan penelitian yang dapat dijadikan bahan pertimbangan untuk penelitian selanjutnya untuk mendapat hasil yang lebih baik. Keterbatasan peneliti ada kah terbatasnya akses dokumen yang didapat karena sebagian dokumen merupakan dokumen rahasia dari perusahaan.

C. Saran

Berdasarkan simpulan di atas, maka peneliti dapat memberikan saran sebagai berikut:

- 1. Pihak *Shipper* sebaiknya bekerja sama dengan instansi terkait dalam proses pengamanan pada saat tongkang menuju *loading point*.
 - 2. Perusahaan *Shipper* dan *Surveyor cargo* sebaiknya mengadakan pelatihan khusus untuk karyawan yang terlibat langsung di lapangan agar pekerjaan lebih efektif dan efisien serta mengurangi kesalahan dalam pekerjaan.

LAMPIRAN

LAMPIRAN 1 Hasil Wawancara

LAMPIRAN

Wawancara 1

Peneliti melakukan wawancara dengan narasumber 25 Juni 2022 pukul 07.35 WITA di MV. BBG Yulin.

Narasumber: Foreman (Akram) PT. Putra Lintas Mandiritama

Hasil wawancara sebagai berikut:

Peneliti :"Selamat pagi, mohon izin pak maaf mengganggu waktunya sebentar"

Narasumber :"Selamat pagi juga, bagaimana det ada yang bisa saya bantu?"

Peneliti :"Izin bertanya pak, menurut bapak apa kendala yang sering dihadapi saat betugas di Muara Berau?"

Narasumber :"Kendala yang sering terjadi adalah kurangnya pengawalan tongkang yang menyebabkan batubara itu terjadi pencurian det."

Peneliti :"Apa resiko bila terjadi pencurian muatan batubara pak"

Narasumber :"Resiko pertama adalah hasil muatan tidak sesuai permintaan pemuatan, resiko adalah pihak dari shipper mengalami kerugian akibat terjadinya pencurian muatan batubara."

:"Siap pak terimakasih informasinya dan waktunya yang bapak berikan." Peneliti

Narasumber :"iya sama - sama det"

Samarinda, 25 Juni 2022

Akram

(PT. Putra Lintas Mandiritama)

LAMPIRAN 2 Hasil Wawancara

Wawancara II

Peneliti melakukan wawancara dengan narasumber 25 Juni 2022 pukul 07.35 WITA di MV. BBG Yulin.

Narasumber : Shipper (Rangga) PT.Trisensa Mineral Utama

Dengan hasil wawancara sebagai berikut:

Peneliti :" Selamat pagi pak mohon izin mengganggu waktunya sebentar pak"

Narasumber :"Selamat pagi det, bagaimana ada yang bisa saya bantu?"

Peneliti :"Menurut bapak apa yang menyebabkan ketidaksesuaian *pre-stowage* plan dengan final stowage plan."

Narasumber :" Dikarenakan banyak faktor penyebab salah satunya adalah tidak ada pengamanan muatan yang dilakukan selama perjalanan di sepanjang sungai Mahakam."

Peneliti :"Kenapa pengamanan muatan tidak dilakukan oleh perusahaan pak?

Narasumber :"Hal ini terjadi karena belum adanya anggaran untuk pengamanan muatan oleh pihak TNI dan Polri, sehingga sering terjadi pencurian muatan batubara oleh masyarakat."

Peneliti :" Menurut bapak apakah hanya pencurian muatan penyebab terjadinya terjadinya ketidaksesuaian *pre-stowage plan* dengan *final stowage plan*."

Narasumber :"Tidak, ada beberapa faktor lain yaitu kondisi ombak di Muara Berau anchorage yang besar sehingga membuat pembacaan draft kapal sulit dilakukan."

Peneliti :" Siap pak terimakasih informasinya dan waktunya yang bapak

berikan."

Narasumber :"Sama - sama det"

Samarinda, 25 Juni 2022

Rangga

(Shipper PT. Trisensa Mineral Utama)

LAMPIRAN 3 Hasil Wawancara

Wawancara III

Peneliti melakukan wawancara dengan narasumber 25 Juni 2022 pukul 07.35 WITA di MV. BBG Yulin.

Narasumber : Surveyor (Jejen A.P)PT.SCCI

Hasil wawancara sebagai berikut:

Peneliti :"Selamat pagi pak mohon izin mengganggu waktunya sebentar pak"

Narasumber :"Selamat pagi det, bagaimana ada yang bisa saya bantu?"

Peneliti :"Menurut bapak faktor apa yang menyebabkan ketidaksesuaian *pre-stowage plan* dengan *final stowage plan*."

Narasumber :"Faktor dari penyusutan lebih kepada non teknis det, semisal cargo tercuri sepanjang sungai Mahakam, adanya tumpahan pada saat bongkar muat dan cargo kering saat perjalanan atau kapal sedang waiting."

Peneliti :" Siap pak terimakasih informasinya dan waktunya yang berikan."

Narasumber :"Sama – sama det"

LAMPIRAN 18 Letter of protest

PORT: SAMARINDA, INDONESIA DATE: 25 JUN 2022

To: PT Wallem Sentosa Shipping Services, Attn:Sajin Varghese Co: Lss Ocean Transport DMCC, Attn:Suchitral Thevar Co: Shanghai Oceanfrate Ship Management Co.Ltd Co: GS Shipping Co.Ltd. Co: Whom it May Concerned Fm: Master of M/V BBG Yulin

CERTIFICATE OF DEADFREIGHT

A. Declared Ship's Loadable Quantity : 77,000 MTS
B. Declared Shipper's Figure : 76,625 MTS
C. Discrepancy between A & B : 375 MTS

THIS IS TO CERTIFY THAT THE MASTER OF ABOVE CAPTIONED VESSEL HAS DECLARED TO CHARTERER LSS Ocean Transport DMCC, THAT VESSEL CAN LIFT A TOTAL AND COMPLETE CARGO OF 77,000 MTS OF COAL (GRADE:) IN BULK BUT AS PER AGENT/SHIPPER'S FIGURES LOADED ONLY 76,825 MTS.

ON BEHALF OF MY OWNERS AND/OR CHARTERERS I THEREFORE TENDER A NOTICE OF PROTEST AND RESERVE THE RIGHT TO CLAIM DEAD FREIGHT FOR THE SHORT LIFTING OF $\underline{375~MTS}$.

WHEREAS THE SAID DISCREPANCY BEING BEYOND VESSEL'S CONTROL, THE OWNERS, THE MASTER, THE VESSEL AND THE CREW ARE NOT RESPONSIBLE FOR ANY DISPUTE AND ALL CONSEQUENCES AND/OR LIABILITIES OF ANY KIND WHATSOEVER DIRECTLY OR INDIRECTLY ARISING FROM OR RELATING TO THE SAID DISCREPANCY.

KINDLY ACKNOWLEDGE RECEIPT OF THIS LETTER BY SIGNING AT THE SPACE BELOW ALLOWING VESSEL TO SAIL W/O ANY LIABILITY OR WHATSOEVER.
